BRIGHT LEARN BUSINESS ANALYTICS
FOUNDATIONAL CONCEPTS

27 April 2026

1. 1. **Business Analytics** refers to using using data to improve business decisions and solve business problems using trends from the data and facts; For example FNB uses transaction analytics to detect fraud in real-time and to offer personalized loans.

2. **Data Analytics** is the analyzing of raw data to identify patterns, trends and relationships that can support decisions, Netflix can be used as an example because it analyzes ones viewing history and recommends shows you will likely watch next.

3. **Business Intelligence** refers to the tools and systems used to report, analyze and monitor the business performance, an example ~~will~~ would be the Power BI dashboard used by Shoprite to track daily sales by store and instantly spot which branches failed to reach their target

4. **Data Driven Decision Making** is making decisions using evidence from data instead of relying on instict. Amazon using customer click and purchase data to decide which products to stock in their ~~w~~ local warehouses for next-day delivery

5. **Big Data** is very large and complex data sets that traditional systems struggle to process. An example would be Google processing billions of daily search ~~que~~ queries to detect flu outbreaks faster than traditional health reports

6. **Descriptive Analytics** focuses on understanding what happened in the past through reports & summaries Woolworths uses monthly sales reports to show which products sold best and worst last quarter

7. **Diagnostic Analytics** is understanding what what happened ~~in the past~~ by identifying causes & contributing factors. Instagram analyzed a drop in engagement and found the algorithm change caused less reach for photo posts vs Reels.

8. **Predictive Analytics** suggests the best action to take based on data and optimization Spotify predicts which songs you will skip and builds your Discover Weekly playlist based on listening patterns

Scanned with CamScanner

9. Prescriptive Analytics uses/suggests the best action to take based on data and optimization. An example would be a delivery route optimization

10. Data Literacy is the ability to read, understand and use data correctly in decision-making. an example would be reading sales dashboards daily to read stock and promo performance then decide what to order, which is done by the store manager.

DATA, MEASUREMENT AND REPORTING

11 Structured Data is organized data that is stored in columns and rows so it can be analyzed easily. An example would be an Excel table when one does a spreadsheet.

12. Unstructured Data is data without a fixed format such as videos, PDFs, text or audio. Cape Town customer service ~~cent~~ receives thousands of WhatsApp voice notes and photos sent to report report slow service delivery ~~in~~ to the city.

13 Data Warehouse is a central storage system for large amounts of data used in analysis, a company like Takealot uses a central data warehouse to combine sales, inventory, and delivery data from all warehouses for reporting.

14 Data Mining is finding hidden patterns and relationships in large data, Amazon uses data mining to analyze customer behaviour, purchase history, and browsing patterns

15. Data Visualization is representing data through charts and graphs to improve understanding, when marketing directors do a presentation, they usually use ~~gra~~ revenue graphs and charts to make their presentations more understandable.

16 Dashboard is a visual display showing important metrics and KPI's in one place, a marketing dashboard is one example

Scanned with CamScanner

17 Metric is any measurable value used to monitor performance, an example would be student regularly accessing a website like Google.

18 KPI is a metric linked directly to important business goals, e.g. how a business retains its customers (customer retention)

19 Benchmark refers to a standard used to compare business performance, an example would be Pep and Ackermans compare their average sales

20 Segmentation is dividing customers into groups based on shared characteristics like age, gender, and size. Most stores have departments to divide the store where it only caters for a specific group of people or specific things only.

CUSTOMER AND SALES KPI's

21 Conversion Rate is the percentage of users who take a desired action, tourists who come to our country to buy.

22. CAC is the average cost spent to acquire one new customer, PEP is spending money for marketing so that they can attract new customers

23 CLV is the total ~~cost~~ value or profit a customer brings home, e.g. the revenue Netflix makes from subscriptions.

CLV : CAC Ratio - Healthy when CLV is higher than CAC

24 Churn Rate: The percentage of customers a business losses, e.g. Brightlearn losing its customers through cancelled subscriptions.

Scanned with CamScanner

25 Retenton Rate is the percentage of customers kept over time so Brightlearn getting learners/people to renew their studying subscription on their portal.

26 NPS is the measures customer loyalty and willingness to recommend a business, e.g. Brightlearn asking its students to do a survey or feedback to show that the company is doing good.

27. AOV is the average amount spent per transaction, so an example would be a tender for dishwashers said to be at R30 000 per 50 l of dish washing soap

28 Sales Funnel is the stages a customer goes through before purchasing so for example a new mother would want to check the fabric, durability, and quality of a stroller before buying it.

MARKETING and CAMPAIGN ANALYTICS

29 Marketing Campaign is a planned effort to promote a product or service, Dove hosting a product launch campaign for their skin care/body lotion, even giving out small Dove side bags.

30 Post-Campaign Review/Analysis is reviewing the results after a campaign to measure success. For example Dove had to review the sales performance of the body lotion after the launch.

31. Incremental Revenue, ~~these~~ this is the extra revenue generated due to a campaign or action for example Dove sales increase after advertisement

32 ROI is the measure of probability by comparing returns earned to investment cost. a return on investment meaning that the money Brightlearn makes after all the costs/expenses are paid.

33. ROAS measures the revenue generated from advertising spent, a great example is Rophiwa Nemubula, the founder of Brightlearn he used TikTok, ~~and~~ word of mouth ~~to~~ and other social media apps to advertise, which was free but he makes R600 per student.

Scanned with CamScanner

34 CTR is the ~~pert~~ percentage of people who click on an ad or link, a rate/ number of people who click the link to Lasizwe's Unlycensed show on YouTube

35 Bounce Rate is the percentage of visitors leaving after viewing one page for example if one is done watching unlycensed, they might hit the homepage exit button cause they are done watching

36 A/B Testing is comparing two versions to see which one performs better, e.g. Taking an iPhone 13 and 15 to compare their features and camera quality.

37. Lead Generation is attracting and capturing interest from potential customers, e.g. for one to use the MacDonalds app, you need to enter your information such as email address, and phone number.

38. Marketing Attribution is identifying which marketing channel contributed to results. e.g checking whether the bill boards or the Instagram sales brought in more revenue.
